C-AD ACTIVITY NOVEMBER 2025

INTEGRATED FAILURES (GREATER THAN ONE HOUR) BY SYSTEM -- NOVEMBER 2025

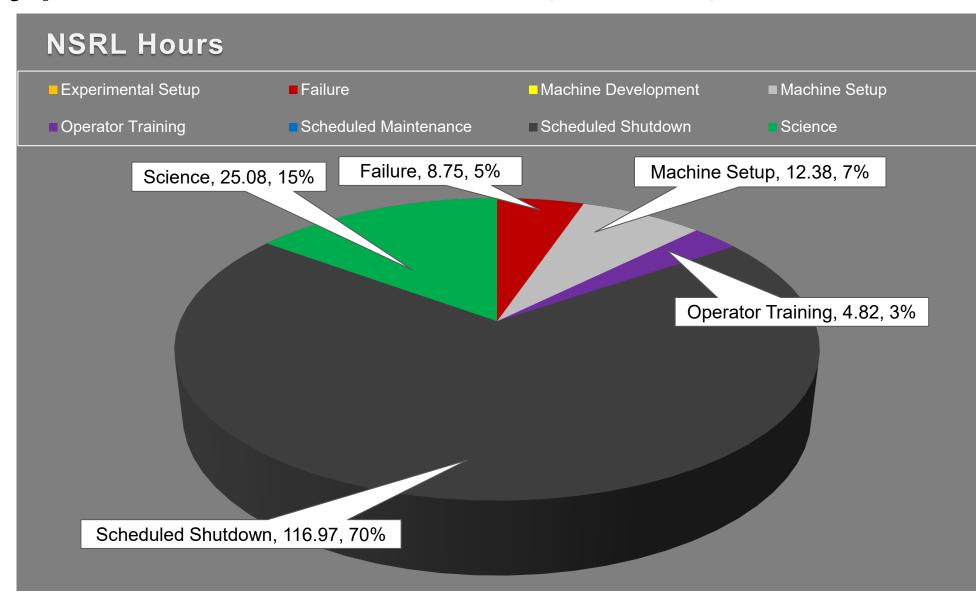

NSRL activity past weeks: 11/25-12/2/2025 (as of 0800)

NSRL running continues.

Various setup and user beam time through the week.

12 EBIS species, Tandem Au, Linac protons logged to NSRL

Run 26-A continues, schedule posted with users up to 21 December.

Availability: 82.9%

Notes from Operations

Notable failures (>1 hr)

sPHENIX work on TPC éxtends beyond maintenance period.

 Yellow injection kicker failure, ALE faults; work extended beyond store

 Beam abort, Controls failure of 4b-rtdl, Blue QLI, extensive recovery of various systems, including sPHENIX magnet

- sPHENIX access for TPC issue (2x)
- Booster MMPS trip on water fault, léak repaired
- EBIS 16-pole deflector bias PS failure; replaced

Other notes

- Other STAR, sPHENIX accesses
- RHIC RF station YS2, BS5 trips required expert assistance
- AGS sector A ion pumps tripped, closing vacuum valves; reset behind store
- STAR Trim West magnet trip, CAS recovered
- Tandem MP7 tuning, delayed dump
- bi8-tv8-ps failure, removed from operating
- Other various trips, resets, tuning, foil changes (16 resets logged, in addition to short failures)

Over 19 hours CeC beam; 8 hours polarized beam development, other setup behind stores this week.

NSRL Booster beam energy

Reminder from Operations

- MCR beam operations continue
 - RHIC physics continues
 - Tandem (MP7) remains sole provider of Au31 for RHIC
 - NSRL shifts scheduled for users & MD, 2 shifts/6 days this week, 5 days next.
 - Au31 from Tandem for higher intensity
 - Protons from Linac OPPIS
 - Other ion beams from EBIS
 - BLIP run cancelled for December.
 - ORC in progress, but no planned beam in BLIP line.
 - AGS tuning, pp setup, other studies to continue behind stores as time allows.
 - MCR shift coverage 24/7
