

# Operations

- Very busy week in the yellow ring and MCR
- 24 hours of CeC
- Four days of 9.8 GeV fixed target
- 32 hours of 8.65 GeV fixed target
- One day of 13.5 GeV fixed target
- 8.65 and 13.5 created from scratch

# Moving ahead

- 0800 tomorrow begins 4 hour access to prepare for the remainder of the run, then CeC/APEX time
  - > Final EIC APEX scheduled for Friday at 0800 for five hours. Requires a mode switch on each end from/to CeC.
  - > Presumes that the issues with stochastic cooling are resolved
- Saturday @ 0800 RHIC and injectors switch to Oxygen collisions
