

- Quieter week due to teaching.
- Continuing with TDR plots.
- First look at beam gas simulation file.
 - Current cuts kill DVCS event selection.
 - (Not sure how many DVCS events actually got used), but currently see
 - 727k single γ events (MC)
 - 727k single p' events (MC)
 - 255k single e' events (MC)
 - 0 exclusive DVCS events (MC; $e'p' \gamma$, $Q^2 > 1 \text{ GeV}^2$, $M_{\text{miss}}^2 < 1 \text{ GeV}^2$)
