

STAR Status -6/24

- High-, Low- luminosity mode running (4+2 hrs, 5+3 hrs)
- **Luminosity leveling:** ZDC at 100 kHz (no crossing angle) and 13 kHz (with 1 mrad crossing angle)
- Continuous gap cleaning at 1 Hz acceptable (preferred to 0.25 Hz)
- Too hot (yesterday, today) for the Magnet cooling capacity - Half field running (opportunistic configuration to increase low-pt acceptance for UPC and min-bias) cooling system check planned tomorrow during APEX
