

Dear all,

Here are the minutes from today's meeting.

---

o News from QM

Jaein won the poster presentation award and will give a flush talk. Congratulations! Please take a look and send him comments.

o Onsite report <Itaru>

- The warm up of the RHIC magnets is in progress. The current plan is to start work in the tunnel from Tuesday morning. The location of the short has been identified by now to be between D0 and Q4 magnets where 5 splice regions are the suspect.
- There is DAQ workfest is going on in 1008 to hunt for a bug in EMCal and MBD whose system had to be upgraded since the end of Run24 to keep the security up-to-date. They have been causing crashes in the big-partition.
- TPC gas bottle issue has been converged by now. They've identified the lot of CF4 bottles which has some contamination.
- INTT looks still in a good shape.
- **Itaru** will talk to Raul to automate the recovery process after rebooting the felix server, so that we can reboot the server by ourselves in case Raul is not available during the experiment.

Regards,

-itaru
