ePIC Physics, Software, and Computing Discussion, September 3, 2025.

1

Improving Access to Approved Plots

- We will have approved plots from detector and physics studies that will be available via Zenodo and used for ePIC presentations.
- For the (pre)TDR, we agreed that these plots will be accompanied by a repository following our [Guidelines for Reproducing TDR Plots](#). This is a good practice for all studies.
- However, browsing Zenodo for specific plots can be cumbersome. Therefore, we propose using the **image_browser** to — surprise — browse the approved plots that are hosted on Zenodo.

Requirements and Considerations:

- Each plot in the **image_browser** must be linked to its corresponding Zenodo entry for full details.
- All supplementary information will be provided via Zenodo.
- The **image_browser** is only intended for previewing and browsing the plots.
- Tags will be maintained and updated to reflect plot descriptions, enabling easy search and filtering.
- Do we require a password for accessing the image browser?
- Are there any additional requirements or concerns we should consider?
