

# Tracking Meeting

Joseph Bertaux

Purdue University

May 22, 2025

- The more recent classes (`InttMap`, `InttFeeMap`) are almost unused outside of `intt`
  - Used in `simulation/g4simulation/g4intt/PHG4InttDetector`
- Current plan is to just use `InttMapping` instead
- I may make **transparent** improvements to the implementation in `InttMapping`
  - e.g., no changes to the names of classes, methods, or files

- Only class that will be affected is `InttSurveyMap` and `InttArborist`
- I will write macros to check the output of these classes before and after change over a limited but comprehensive data set

- Can use `grep` to find occurrences in committed files

```
1 grep -rn "#include <intt/InttMap" $(git ls-files)
2 grep -rn "#include <intt/InttFeeMap" $(git ls-files)
```

- The include syntax is only good outside of `intt` subdir
- but the usage within the `intt` subdir
