

# Large mirror test stand

Jan Vanek

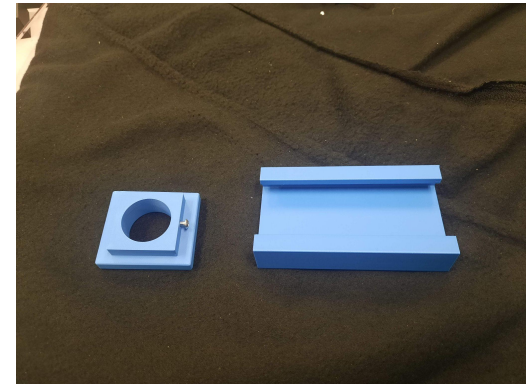

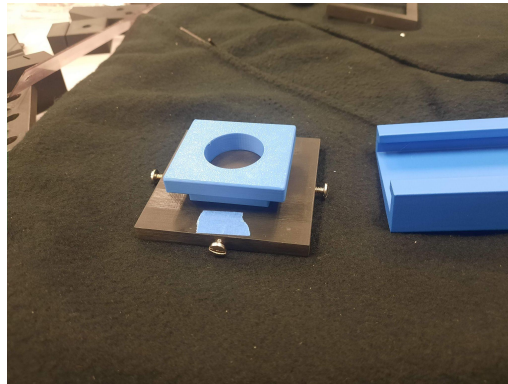

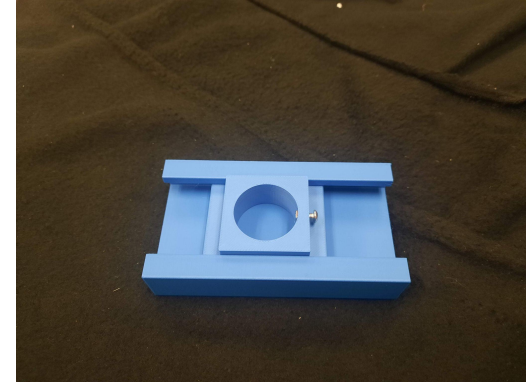

08/11/2025

# Overview

- Small flat mirror holder
  - Test fitment

# Flat mirror holder – reminder

- New holder for flat mirrors to perform surface scan in the large test stand with built-in 7.5 deg tilt
  - Allows manually shifting mirror in horizontal direction
  - Vertical direction will be covered by linear stage movement
  - Uses original mirror holder from small stand
    - We have a new holder for small stand which allows similar measurement with the small test stand
    - We will be able to do cross-check measurements
  - Mounting done using standard 1" holder

# Flat mirror holder – fitment

- New holder allows fitting flat mirrors into large test stand and adjust position in horizontal direction
- The new holder does not interfere with large mirror holder or the large mirror itself
