

# Communications

- Current #1 priority for Physics Analysis is preTDR
  - Goal for coming months will be the assessment of systematics in preTDR scenarios, and the completion of other goal plots for the preTDR e.g. eID benchmarks, beam and physics backgrounds, eA cross section ratio
- For inclusion of Luminosity and Polarisation: YR targets 1% for both, but this will be after many years, for current studies we should use conservative estimates of **1.5% for both**
- Two weeks from now we have the [Physics Readiness Workshop](#) on the 17th/18th Sep.
  - We will not meet that week, we will announce the date for the next PWG meeting in the coming weeks
