

Photodiode Calibration Setup

Cheuk-Ping Wong

10-08-2025

HRPPD QA Setup

- Reference photodiode is used to correct for the fluctuation of the light source
- Each test station across the pfRICH working group will receive a photodiode calibrated at BNL

HRPPD QA setup

Figure 2 A crosscut of the optical head (top view), with a focusing lens, a beamsplitter and a reference photodiode mounted on a movable table. An HRPPD assembly with a 4x4 array of small 16ch MCX interface boards is seen at the bottom of the picture, mounted on a side wall.

Photodiode Calibration Setup at BNL

On the other side of the bench

Power supply

monochromator

Light source

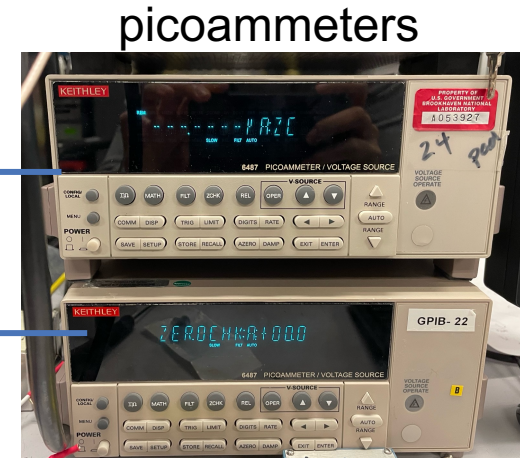

spitter

Reference photodiode

Reference photodiode

photodiode

photodiode

Quick test (w/ filter)

- Room lighting:
 $\sim 10\text{nA}$
- + Laser pointer:
 $< 1\mu\text{A}$

USB hub connected to eic@lappd

Todo List

☐ Modify run scripts

- ☐ Double check the bias voltage. It should be zero for photodiode calibration
- ☐ Light source beam size = 1mm
- ☐ Modify scan range (xyz) – see SurfaceScan.C
