SVT in (October) simulations

- Past simulations used highly simplified detector descriptions, which do account for overall geometry and material,
- Paths to go directly from CAD into GEANT have been explored, but are not practical at this time,
- Concerted effort across SVT to improve the situation,
Many thanks to all who contributed!
- Next few slides illustrate some of the improvements.

SVT Inner Barrel in ePIC simulation

Until ePIC 25.08:

- 128 box shape per layer to approximate the cylinder
- No RSU structure

Anticipated for 25.10:

- Curved RSU sensor with inactive areas
- IB support structure and cables

Stp file of the design → simplified 2D CAD drawings → dd4hep geo description

Documents available at [PR803](#)

Build Mechanical structures with Simple TGeo Shapes

Material Scan

- From stp file → GDML

Courtesy of R.Turrisi

Material budget, $10 < \phi < 30$

- This simplified geometry for 28.10:

RSU in Simulation

Figure 3.37: Architecture of the bottom half sensor unit (not to scale).

2x2 sections, 3 tiles/section:

Curved RSU in simulation:

Note: simulations now do account for insensitive sensor areas, however, they do not simulate e.g. the full readout chain,

Beam backgrounds are part of track finding and reconstruction studies, see e.g. <https://indico.bnl.gov/event/29753/>

Comparison of flat_OB past to present

Silicon Barrel

Silicon Barrel - castellated

See also: <https://indico.bnl.gov/event/30061/>

Flat OB – L3

Top radius: ~269.1 to ~269.7mm

Bottom Radius: ~263.1 to ~263.7 mm

Difference: ~6mm

Flat OB – L4

Top radius: ~424.1to ~424.5mm

Bottom Radius: ~418.1 to ~418.5 mm

Difference: ~6mm

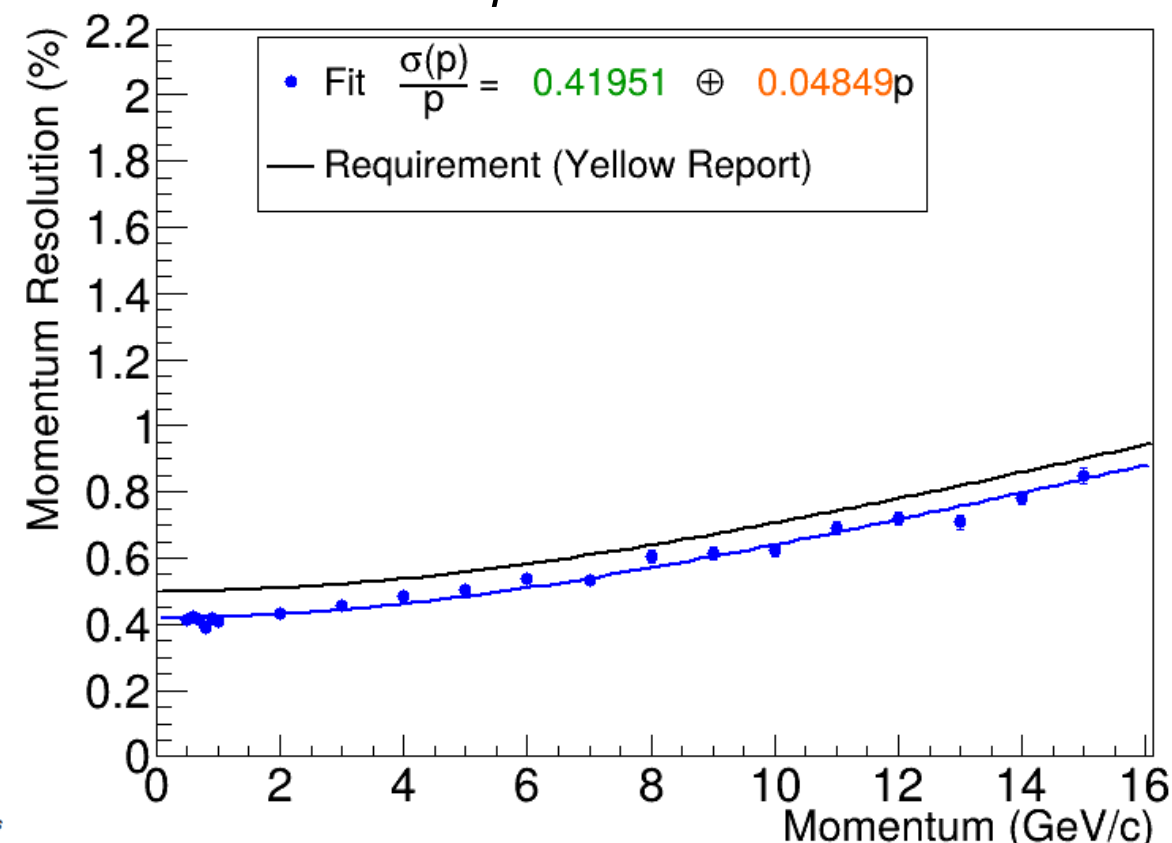

Flat_OB Momentum resolution

$$-0.88 \leq \eta \leq 0.88$$

Events with a reconstructed track

Distribution: η

SVT in (October) simulations

- Considerable progress over past simulations in terms of SVT detector description,
- Updated service estimates, as averaged material equivalents – not individual cables etc,
- Not in for October: recent changes in the length and configuration of the hadron arm – consistent across SVT, MPGD, and ToF
- Track finding and reconstruction simulations now incorporate beam backgrounds.
