GLASGOW

EIC-UK Community Meeting - 09/12/25

# Since the last meeting

- Overall, quieter week (teaching now over, so have time to devote to EIC work).
- Discussions about treating MC events.
  - Current analysis doesn't treat MC truth particularly well.
  - Need to make modifications to analysis procedure (HoFNoBeamFX / nominal beams for ab).
- Beam-gas backgrounds.
  - New sample available (previous sample had issue with event timing).
  - Need to analyse these (21k total files! – *long* time to run).
