

Recent INTT status

- Since last Friday, INTT has been relatively in stable condition including INTT2 Felix ch9,12,13 (except Dec 22 morning)
- The flow rate for the west chiller dropped down to ~3gpm (Dec 23 night), then come back to normal. Rob adjusted the vacuum.
- Some of mpod modules for north ladders became unresponsive and recovered by cycling the power for the crate (2W3)
- Implemented an automatic switch between streaming/trigger mode for physics cosmics data taking but the tracking group want INTT to be in streaming for cosmics too, so we took back the function...

Intt Hit Map
Run 79705, Events: 302475865, Thu Dec 18 12:27:45 2025

Tasks before the end of sPHENX operation

- Cosmic data for more than several hours in the triggered mode with the HCal coincidence trigger with/without the magnetic field for the detector study (suggested by Genki)
- Anything else?
