

Mlp's one-slide Summary

What's done or running :

- We have MPOD control
- The backups are running
- The RCDAQ setup seems to be working again (elog, etc)

Still to be done:

- Investigation of the AstroPix "stall"
- Adding MPOD/temperature/etc info to the rcdaq meta-data
- Some amenities (steady-state logging of the above)

I'd like to have a discussion of the general analysis strategy with our multiple streams

I gave a presentation about analyzing RCDAQ data in eicrecon, but that's not "mainstream" yet.

<https://indico.bnl.gov/event/30440/>

Could Wouter take the lead with me on that?
