

Quantum Entanglement at Collider Energies

Monday, 10 September 2018 - Wednesday, 12 September 2018

CFNS Stony Brook

Book of Abstracts

Contents

Welcome from CFNS	1
Entanglement negativity - from fermionic systems to tensor networks	1
Entanglement and eigenstate thermalization	1
Novel collective phenomena at the LHC and their implications to quantum entanglement	1
Recent experimental results and outlook from e+e- annihilation	1
Welcome from CFNS	1
Entanglement negativity - from fermionic systems to tensor networks	1
Entanglement and eigenstate thermalization	1
Entanglement negativity - from fermionic systems to tensor networks	2
Entanglement and eigenstate thermalization	2
Novel collective phenomena at the LHC and their implications to quantum entanglement	2
Recent experimental results and outlook from e+e- annihilation	2
Quantum Tomography with Collider Data	2
DIS as a probe of entanglement	2
Entanglement in spin chains	2
Entanglement dynamics of hadronization	2
Towards simulating QFT's with photons and atoms	3
Entanglement with hidden matter and the constants of nature	3
Correlations in cold atoms: experiment	3
Thermal behaviour and entanglement in Pb-Pb and p-p collisions	3
Quantum simulation of the universal features of the Polyakov loop	3
Is There Quantum Entanglement in Parton Distribution Functions?	3
Maximal Entanglement in High Energy Physics	3

Quantum simulation of the universal features of the Polyakov loop	4
Universality far from equilibrium and entanglement entropy	4
Multipartite Entanglement at Quantum Criticality	4
Large Gauge Symmetry and Memory Effects in Electron-Ion Collisions	4
Quantum chaos and entanglement generation in matrix quantum mechanics	4
Low-x from Strings at the EIC	4
Quantum field theory with quantum computing	4
PEPS with Gauge Symmetries: Tensor Network Studies of Lattice Gauge Theories	4
Quantum simulations of lattice gauge theories	5

Monday Morning / 1

Welcome from CFNS

Corresponding Author: abhay.deshpande@stonybrook.edu

Monday Morning / 2

Entanglement negativity - from fermionic systems to tensor networks

Monday Morning / 3

Entanglement and eigenstate thermalization

Monday Morning / 4

Novel collective phenomena at the LHC and their implications to quantum entanglement

Monday Morning / 5

Recent experimental results and outlook from e+e- annihilation

6

Welcome from CFNS

Corresponding Author: abhay.deshpande@stonybrook.edu

7

Entanglement negativity - from fermionic systems to tensor networks

8

Entanglement and eigenstate thermalization

Day 1 - Session 1 / 9

Entanglement negativity - from fermionic systems to tensor networks

Day 1 - Session 1 / 10

Entanglement and eigenstate thermalization

Day 1 - Session 1 / 11

Novel collective phenomena at the LHC and their implications to quantum entanglement

Day 1 - Session 1 / 12

Recent experimental results and outlook from e^+e^- annihilation

Day 1 - Session 2 / 13

Quantum Tomography with Collider Data

Day 1 - Session 2 / 14

DIS as a probe of entanglement

Day 1 - Session 2 / 15

Entanglement in spin chains

Day 1 - Session 2 / 16

Entanglement dynamics of hadronization

Day 2 - Session 1 / 17

Towards simulating QFT's with photons and atoms

Day 2 - Session 1 / 18

Entanglement with hidden matter and the constants of nature

Day 2 - Session 1 / 19

Correlations in cold atoms: experiment

Day 2 - Session 1 / 20

Thermal behaviour and entanglement in Pb-Pb and p-p collisions

Day 2 - Session 2 / 21

Quantum simulation of the universal features of the Polyakov loop

Day 2 - Session 2 / 22

Is There Quantum Entanglement in Parton Distribution Functions?

Day 2 - Session 2 / 23

Maximal Entanglement in High Energy Physics

Day 2 - Session 2 / 24

Quantum simulation of the universal features of the Polyakov loop

Day 3 - Session 2 / 25

Universality far from equilibrium and entanglement entropy

Summary:

Day 3 - Session 2 / 26

Multipartite Entanglement at Quantum Criticality

Day 3 - Session 2 / 27

Large Gauge Symmetry and Memory Effects in Electron-Ion Collisions

Day 3 - Session 1 / 28

Quantum chaos and entanglement generation in matrix quantum mechanics

Day 3 - Session 1 / 29

Low-x from Strings at the EIC

Day 3 - Session 1 / 30

Quantum field theory with quantum computing

Summary:

Day 3 - Session 1 / 31

PEPS with Gauge Symmetries: Tensor Network Studies of Lattice Gauge Theories

Day 2 - Session 2 / 32

Quantum simulations of lattice gauge theories
