### Purpose of this study

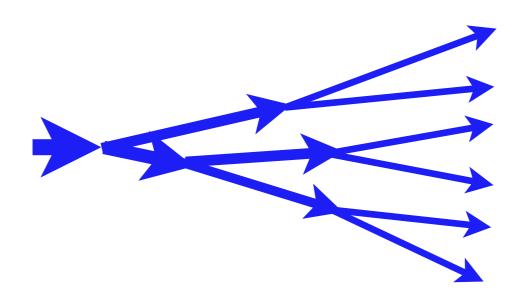

- Demonstrate results from multi-stage jet evolution in JETSCAPE
- Comparison among different module settings
   (MATTER+LBT, MATTER+MARTINI, MATTER+AdS/CFT, etc.)
- Fine tuning of parameters both for pp and for AA are not done yet

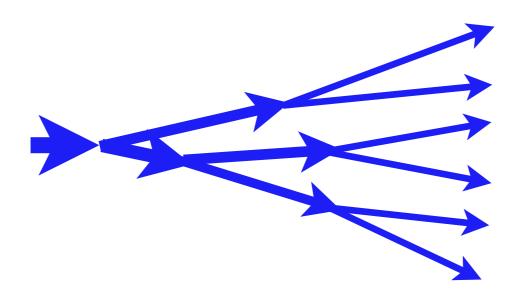

- Settings in simulations for pp collisions
  - MATTER vacuum shower down to  $Q = 1 \, \mathrm{GeV}$

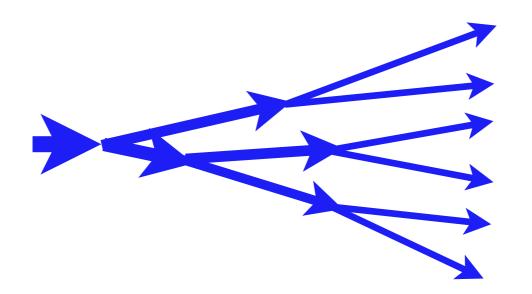

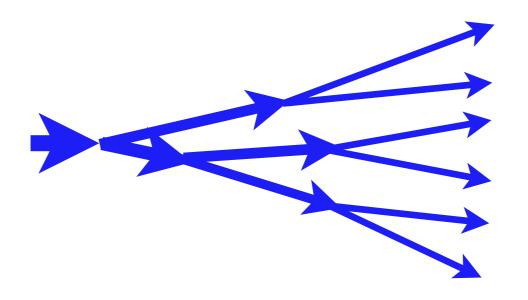

- Settings in simulations for pp collisions

Medium effect during virtuality ordered splitting

## Summary

#### Multi-stage jet evolution in JETSCAPE

- Switching between different energy loss modules by virtuality of partons

Large-Q: virtuality ordered splitting (MATTER)

Small-Q: on-shell transport or strong coupling (LBT, MARTINI or AdS/CFT)

#### Jet substructure from multi-scale description of jet shower

- Significant contribution from recoil effect in LBT
- Medium effect during virtuality ordered splitting

Jet shape: small

Jet fragmentation function: sizable at large-z

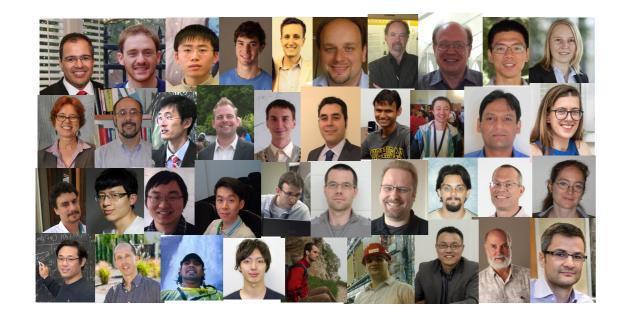

### Outlook

#### Rigorous analysis

- Further parameters tuning both for pp and for AA
- Other observables (more sensitive to details of jet evolution)

#### Updates

- Recoils in MARTINI and medium response in AdS/CFT
- Hydro back reaction to deposited energy and momentum from jet
- Other modules and their combinations
