

Panel Discussion

Berges, Heller, Mazeliauskas, Wiedemann

25.06.2019

Approach to hydrodynamics

... based on input from the speakers: ...

- **Can we discover non-equilibrium features of QGP?** (beyond 1st order gradients)
 - How do expansion and transient modes affect the loss of information in various theories and what are the lessons for non-equilibrium QGP?
 - How can we access 2nd order transport coefficients, incomplete chemical equilibration, increased jet transparency, and all that?
 - How can we access aspects of far-out-of-equilibrium QCD, e.g. in the low p_T behavior?
