

Search for exotic top-quark partners

Thursday, 15 August 2013 09:10 (20 minutes)

We present searches for massive top and bottom quark partners at CMS using data collected at $\sqrt{s}=7$ and 8 TeV. Such partners can be seen in 4th generation models, or can be found in models predicting vector-like quarks to solve the Hierarchy problem and stabilize the Higgs mass. The searches span a range of final states, from multi-leptonic to entirely hadronic, and limits are set on mass and production cross sections as a function of branching ratios.
