

|Vub| from semileptonic B decays at BaBar

Thursday, 15 August 2013 11:30 (20 minutes)

We report on recent BaBar results for the CKM matrix element $|V_{ub}|$ using both inclusive and exclusive measurements of charmless semileptonic B decays. These include the measurement of exclusive $B \rightarrow \pi/\eta/\eta'/\omega \ell \nu$ decays with untagged event reconstruction and the study of the q^2 and lepton energy distribution in inclusive $B \rightarrow X \ell \nu$.
