

Searches for low-mass Higgs at BaBar

Thursday, 15 August 2013 14:30 (25 minutes)

Searches for low mass CP-odd Higgs boson (A_0) predicted in non-minimal supersymmetric extensions of the Standard Model, have been performed at BaBar by studying the radiative decays of the $Y(nS)$ resonances, with $n=1,2,3$. Stringent limits on the production of a light Higgs boson have been set.
