

Measurements of $B \rightarrow DK$ decays to constrain the CKM unitarity triangle angle γ at LHCb

Thursday, 15 August 2013 11:50 (20 minutes)

The angle γ of the CKM unitarity triangle remains the least precisely measured parameter of the CKM mixing matrix. The precision measurement of this parameter is one of the main goals of the LHCb experiment. We present a wide range of measurements of CP violation and partial rates in $B \rightarrow DK$ decays, as well as the latest LHCb measurement of γ combining all the individual inputs.
