

Display Builder Web Runtime

Saturday, 5 October 2019 12:15 (20 minutes)

The CS-Studio display builder is available in both the older Eclipse-based CS-Studio and the latest “Phoebus” version of CS-Studio that no longer relies on Eclipse.

Recent additions include an MEDM converter that directly translates MEDM *.adl files into the.bob* file format. The biggest recent addition is a Display Builder Web Runtime which allows viewing most of the display builder screens, including plots and images, on the web.
