Evolution and Transverse Momentum Dependence in Different Regions

Wednesday, 25 March 2020 11:00 (20 minutes)

I will discuss complications that arise in the factorization of hard processes differential in transverse momentum due to ambiguities in the transition from the small to large transverse momentum regions. I will relate questions about the region transition to the implementation of evolution in transverse momentum sensitive processes such as spin asymmetries. In addition, I will relate the discussion to the implementation of evolution in recent phenomenological studies.
