

XXVIII International Workshop on Deep Inelastic Scattering and Related Subjects

Contribution ID: 251

Type: **Contributed Talk**

Precision (anti)neutrino scattering off nucleons and nuclei

Tuesday, 24 March 2020 16:50 (20 minutes)

A technique has been recently proposed to address the main limitations of past neutrino scattering experiments. In particular, it allows precise measurements of high statistics samples of (anti)neutrino-hydrogen interactions and of various nuclear targets. The planned high intensity LBNF beams give access to a broad mixture of measurements of electroweak parameters, QCD and hadron structure of nucleons and nuclei, nuclear physics, form factors, structure functions and cross-sections, as well as searches for new physics or verification of existing outstanding inconsistencies.
