

XXVIII International Workshop on Deep Inelastic Scattering and Related Subjects

Contribution ID: 134

Type: **Contributed Talk**

Electroweak and QCD aspects in V +jets in CMS

Wednesday, 25 March 2020 09:45 (25 minutes)

The study of the associated production of vector bosons and jets constitutes an excellent testbench to check numerous QCD predictions. Total and differential cross sections of vector bosons produced in association with jets have been studied in pp collisions at 7, 8 and 13 TeV center-of-mass energies. Differential distributions as function of a broad range of kinematical observables are measured and compared with theoretical predictions. Final states with a vector boson and jets can be also used to study electroweak initiated processes, such as the vector boson fusion production of a Z or W boson that are accompanied by a pair of energetic jets with large invariant mass.
