Recent measurements of top quark properties in CMS

Tuesday, March 24, 2020 12:40 PM (20 minutes)

Measurements of top quark properties using data collected by the CMS experiment at 13 TeV are presented. They include direct measurements of properties or extractions using differential cross section measurements. Among them, the latest results on top mass and its running, top Yukawa coupling, the top sector of the CKM matrix, $t\bar{b}$ forward backward asymmetry will be discussed.
