

# XXVIII International Workshop on Deep Inelastic Scattering and Related Subjects

Contribution ID: 275

Type: **Contributed Talk**

## Insights from the CT18 NNLO global QCD analysis

*Tuesday, March 24, 2020 9:30 AM (30 minutes)*

The final CT18 global analysis released at the end of 2019 is based on the most complete combination of LHC and non-LHC experimental measurements to date. We discuss implications of this expansive data set for the understanding of the unpolarized PDFs and introduce several alternative fits to explore a number of critical features: the PDF pulls of the high-precision ATLAS 7 TeV W/Z data (CT18A); the effects of altering the QCD scale choices for the low-x HERA DIS data (CT18X); and the sum of these changes, including variations of the charm mass (CT18Z). We also examine theoretical predictions based upon CT18 at NNLO and NLO for several standard candle LHC cross sections, parton-parton luminosities, and PDF Mellin moments.

**Primary authors:** HOBBS, Timothy (Southern Methodist University and EIC Center@JLab); Dr HOU, Tie-Jiun (Shenyang, Northeast U. Tech.); Dr GAO, Jun (Shanghai, Jiao Tong U. & Peking U., CHEP); Dr XIE, Keping (U. Pittsburgh (main) & Southern Methodist U.); Prof. DULAT, Sayipjamal (Xinjiang U.); Prof. GUZZI, Marco (Kennesaw State U.); Prof. HUSTON, Joey (Michigan State U.); Prof. NADOLSKY, Pavel (Southern Methodist U.); Prof. PUMPLIN, Jon (Michigan State U.); Prof. SCHMIDT, Carl (Michigan State U.); SITIWALDI, Ibrahim (Xinjiang U.); Prof. STUMP, Daniel (Michigan State U.); Prof. YUAN, C.-P. (Michigan State U.)

**Presenter:** HOBBS, Timothy (Southern Methodist University and EIC Center@JLab)

**Session Classification:** Structure function and parton densities

**Track Classification:** Structure Functions and Parton Densities
