

XXVIII International Workshop on Deep Inelastic Scattering and Related Subjects

Contribution ID: 331

Type: **Contributed Talk**

Recent results on ultra-peripheral heavy-ion collisions and on central exclusive production in pp collisions with the CMS experiment

Wednesday, 25 March 2020 16:30 (18 minutes)

In this talk, we will present recent results on ultra-peripheral heavy-ion collisions with the CMS detector. This will include measurements on vector meson photoproduction in ultra-peripheral pPb and PbPb collisions, as well as light-by-light scattering measurements, and new studies of exclusive processes in photon-induced interactions to study low-x QCD dynamics. In addition, recent results on exclusive $\pi^+\pi^-$ production in proton-proton collisions will also be shown.

Presenter: BYLINKIN, Alexander (The University of Kansas (US))

Session Classification: Small-x, Diffraction and Vector Mesons

Track Classification: Small-x, Diffraction and Vector Mesons
