The University of California EIC consortium

UNIVERSITY Office
OF of the
CALIFORNIA President

- We formed the consortium in 2019 with the long-term view of coordinated efforts towards and during EIC era.
- Currently funded, in pilot form, by the UC Office of the President. Our focus is on physics enabled with jet/heavy flavor and related measurements, tracking and calorimetry.
- Our EoI will focus on silicon tracker and calorimeter systems. Our intent is to exploit our scientific and technical infrastructure at the UC-managed National Laboratories and UC Campuses to build part of these detectors in the West.
- One of our goals is to offer a unique educational opportunity for UC students
