Charm physics with physical light and strange quarks using domain wall fermions

Wednesday, 25 June 2014 11:30 (20 minutes)

This talk will provide an overview of RBC/UKQCD's charm project on their 2+1 flavour physical point ensembles using Moebius Domain Wall Fermions for the light as well as for the charm quark. After a brief motivation of DWF as a suitable heavy quark discretisation we will show first results for masses and matrix elements.
