## QCD Thermodynamics With Continuum Extrapolated Wilson Fermions

*Thursday, 26 June 2014 14:55 (20 minutes)*

We study 2+1 flavour QCD thermodynamics using Wilson fermions in the fixed scale approach. The temperature dependence of the renormalized chiral condensate, quark number susceptibility and Polyakov loop is determined at three pion masses down to 280-MeV. Four lattice spacings are used allowing for a controlled continuum limit.
