## Pion-pion scattering phase shifts with the stochastic LapH method

*Monday, 23 June 2014 14:15 (20 minutes)*

Progress in calculating scattering phase shifts on  $N_f=2+1$  anisotropic clover Wilson lattices is described. The stochastic LapH method facilitates computations in large volumes and for light pion masses. Results for pion masses down to 250 MeV, keeping  $m_\pi L > 4$ , are presented.
