Updated results from maximally twisted mass QCD at the physical point

Friday, 27 June 2014 15:35 (20 minutes)

In this contribution, updated results from simulations by the European Twisted Mass Collaboration at the physical point using Wilson twisted mass fermions with a clover term are presented. We discuss results for the pseudoscalar decay constants f_K , f_D and f_{D_s} and the corresponding masses. In addition, we provide evidence for a largely reduced flavour symmetry breaking in the presence of a clover term.
