Locating the critical end-point of QCD

Monday, 23 June 2014 17:10 (20 minutes)

I will give an overview on our recent results for the phase diagram of QCD with $N_f=2+1$ and $N_f=2+1+1$ flavors. We use a combination of lattice and Dyson-Schwinger methods to determine the chiral and deconfinement order parameters at finite temperature and chemical potential. We find a critical end-point at large chemical potential in the vicinity of the chiral critical line extrapolated from lattice QCD.
