Dark matter baryon candidates in the sextet gauge model

Friday, 27 June 2014 14:55 (20 minutes)

The strongly coupled near-conformal gauge theory with two fermion flavors in the two index symmetric (sextet) representation of the $SU(3)$ color gauge group is the minimal realization of the composite Higgs mechanism. We discuss the baryon mass spectrum in this theory using staggered fermion operators to identify dark matter candidates.
