Last results of $N=1$ supersymmetric Yang-Mills theory with some topological insights

Friday, 27 June 2014 16:30 (20 minutes)

We summarize the last results of our collaboration concerning $N=1$ supersymmetric Yang-Mills theory in four dimensions on the lattice. We investigate the expected formation of supersymmetric multiplets of the lightest particles and the behaviour of the topological susceptibility approaching the supersymmetric and the continuum limit of the theory.
