

## Meeting in Temple: proposed agenda

The goal of the workshop for the “Electronics and DAQ” is to set a common ground and define the work plan.  
A single parallel session (Friday morning) 3.5 h is sufficient.

**Logistic:** Damien and Andrea will connect remotely to the parallel session - during the next WG meeting we'll call for a volunteer to act as a representative during other sessions / take care of logistics during the parallel session

### Proposed agenda:

- Short introductory talk from the two conveners to present the WG
- Overview talk from R&D23 group (streaming readout) to present ongoing activities
  - Eventual specific talks from sub-groups discussing technical developments in the EIC framework
- Talk from M. Ungaro about possible ideas to simulate a streaming readout system
- Open discussion: goals and deliverables for next meeting

We'll discuss this agenda with the WG during our next meeting to gather further contributions and ideas.

Workshop deliverable: a glossary of terms to be used in the Yellow Report document.
