

Central Detector / Integration subgroup action items

- “Second choice” solenoid design
 - Will have the first meeting with the magnet designers (very) soon
 - A discussion with the Exclusive Reactions WG has just started last Friday; may affect the specs
- Backgrounds
 - Latifa joined the local BNL backgrounds@EIC meeting last Thursday; the decision is that the eRD21 members will be included in all the future work, and the YR chapter will be a snapshot of the ongoing activities
- Dead material, services, fiducial volume definitions
 - Had a discussion with the Software WG last Wednesday
 - Available software will be shaped up and uploaded to the git repository
 - Requests to the detector groups need to be formulated
 - We definitely need a database maintainer (and better a software maintainer too)
- Detector resolution / acceptance parameterizations
 - Not clear yet how to organize all this
