

Facility News

- Federated Identity Management
 - SDCC/RACF requested to join InCommon as a federated IDP (Identity Provider)
 - The SDCC/RACF IDP will be separate from ITD's AD-based IDP
 - Will enable SDCC/RACF users to authenticate to external resources that accept SDCC credentials via InCommon
 - Authentication \neq Authorization → Access to resources dependent on policies at remote facilities
 - External access to BNL resources still an on-going process
 - Enabled on case-by-case basis for certain applications
 - Requires agreement with Cyber-Security
 - Additional considerations such as MFA and Co-Manage

Facility News
