New Physical Phenomena Associated with Vorticity and Spin in Heavy-Ion Collisions

Enrico Speranza

RHIC & AGS Annual Users’ Meeting 2020

October 22, 2020
Outline

- Vorticity and spin physics in heavy-ion collisions
- Quantum kinetic theory
- Spin hydrodynamics
- Polarization observable in heavy-ion collisions
Rotation and polarization

- Condensed matter: **Barnett effect**

Ferromagnet gets magnetized when it rotates

Polarization effects through rotation in heavy-ion collisions? **Yes!**
Noncentral heavy-ion collisions

Noncentral nuclear collisions ⇒ Large global angular momentum
⇒ Vorticity of hot and dense matter ⇒ particle polarization along vorticity
Experimental observation - Global $\Lambda$ polarization

- Polarization along global angular momentum

![Graph showing polarization vs. $\sqrt{s_{NN}}$ (GeV)]

- Weak decay: $\Lambda \rightarrow p + \pi^-$ angular distr.: $dN/d\cos \theta = \frac{1}{2}(1 + \alpha |\vec{P}_H| \cos \theta)$

- Quark-gluon plasma is the "most vortical fluid ever observed"

\[ \omega = (P_\Lambda + P_{\bar{\Lambda}})k_B T/\hbar \approx (9 + 1) \times 10^{21} \text{s}^{-1} \]

Great Red Spot of Jupiter $10^{-4} \text{s}^{-1}$, Turbulent flow superfluid He-II $150 \text{s}^{-1}$, Superfluid nanodroplets $10^7 \text{s}^{-1}$

L. Adamczyk et al. (STAR), Nature 548 62-65 (2017)
Experiments vs theory: $\Lambda$ polarization

**Global - along $J$**

![Graph showing global polarization](image1)

- PRC 76, 024915 (2007)
- This analysis

**Longitudinal - along beam axis**

![Graph showing longitudinal polarization](image2)

- STAR Au+Au $\sqrt{s_{NN}} = 200$ GeV 20%-60%
- Fit: $p_0 + 2p_1 \sin(2\phi)$

- $p_0 = 0.016 \pm 0.003$ [%]
- $p_1 = 0.015 \pm 0.003$ [%]

**Formulas**

\[\Pi^\mu(x, p) \propto (1-n_F)\epsilon^{\mu\nu\rho\tau}p_\nu\omega_{\rho\tau}\]

\[\omega_{\rho\tau} = -\frac{1}{2}(\partial_\rho \beta_\tau - \partial_\tau \beta_\rho)\]

- Theory assumes **local equilibrium** of spin degrees of freedom
- “Sign problem” between theory and experiments for longitudinal polarization!
Does spin play a dynamical role in hydro?

- Relativistic hydrodynamics is a good effective theory: $\partial_\mu T^{\mu\nu} = 0$

**Goal:** Relativistic hydrodynamics (classical) with spin (quantum) as dynamical variable

**Starting point:** Kinetic theory from quantum field theory

- Alternative approaches: Lagrangian formulation, entropy current
  
  K. Hattori, M. Hongo, X.-G. Huang, M. Matsuo, and H. Taya, PLB795, 100 (2019)
  K. Fukushima, S. Pu, 2010.01608 (2020)
Our results:

- How do we describe the orbital-to-spin angular momentum conversion in kinetic theory?
  - Nonlocal particle scatterings (finite impact parameter)

- And in hydrodynamics?
  - Antisymmetric part of energy-momentum tensor
nonrelativistic kinetic theory

Kinetic Theory for a Dilute Gas of Particles with Spin
S. Hess and L. Waldmann

Institut für Theoretische Physik der Universität Erlangen-Nürnberg, Erlangen

(Z. Naturforsch. 21 a, 1529—1546 [1966]; received 6 April 1966)

The kinetic theory of particles with spin previously developed for a Lorentzian gas is extended to the case of a pure gas. In part A the transport (Boltzmann) equation for the one particle distribution operator is stated and discussed (conservation laws, H-theorem). A magnetic field acting on the magnetic moment of the particles is incorporated throughout. In part B the pertaining linearized collision operator and certain bracket expressions linked with this operator are considered. Part C deals with the expansion of the distribution operator and of the linearized transport equation with respect to a complete set of composite irreducible tensors built from the components of particle velocity and spin. Thus, the distribution operator is replaced by a set of tensors depending only on time and space-coordinates. The physical meaning of these tensors (expansion coefficients) is invoked. They obey a set of coupled first-order differential equations (transport-relaxation equations). The reciprocity relations for the relaxation matrices are stated. Finally a detailed discussion of angular momentum conservation is given.

- "There is another effect which we cannot describe with a local collision operator: the orientation of the spin by a local or uniform rotation of the system (Barnett effect)"

- **Caveat**: Nonrelativistic Barnett effect $\Rightarrow$ Magnetization
  Heavy-ion collisions $\Rightarrow$ Spin polarization without magnetization
  (Spin particles + Spin antiparticles)
Wigner function

\[ W(x, p) = \int \frac{d^4 y}{(2\pi \hbar)^4} e^{-\frac{i}{\hbar} p \cdot y} \langle \bar{\Psi}(x + \frac{y}{2})\psi(x - \frac{y}{2}) : \rangle \]

▶ Dirac equation ➞ Equation of motion for Wigner function

de Groot, van Leeuwen, van Weert, Relativistic Kinetic Theory. Principles and Applications

\[ \left[ \gamma \cdot \left( p + \frac{i}{2} \frac{\hbar}{\partial} \right) - m \right] W(x, p) = \hbar \int \frac{d^4 y}{(2\pi \hbar)^4} e^{-\frac{i}{\hbar} p \cdot y} \langle \rho(x - \frac{y}{2})\bar{\psi}(x + \frac{y}{2}) : \rangle = \hbar C \]

\[ \rho = -(1/\hbar)\partial L_I/\partial \bar{\psi}, \ L_I = \text{interaction Lagrangian} \]

▶ ➞ Boltzmann equation and on-shell modification

\[ p \cdot \partial W(x, p) = C \quad \left( p^2 - m^2 - \frac{\hbar^2}{4} \partial^2 \right) W(x, p) = \hbar \delta M \]

▶ Idea: Find approximate solution by expanding in powers of \( \hbar \)

and truncate at first order, e.g.

\[ W = W^{(0)} + \hbar W^{(1)} + \mathcal{O}(\hbar^2) \]
Calculating the Wigner function

- Clifford decomposition

\[ \mathcal{W} = \frac{1}{4} \left( \mathcal{F} + i \gamma^5 \mathcal{P} + \gamma^\mu \mathcal{V}_\mu + \gamma^5 \gamma^\mu \mathcal{A}_\mu + \frac{1}{2} \sigma^\mu{}^\nu \mathcal{S}_{\mu\nu} \right) \]

- Determine \( \mathcal{V}^\mu \) and \( \mathcal{A}^\mu \) from equations of motion

- Assumption: polarization effects at least \( \mathcal{O}(\hbar) \)

\[ \mathcal{V}^\mu = \frac{1}{m} p^\mu \bar{\mathcal{F}} + \mathcal{O}(\hbar^2) , \quad \bar{\mathcal{F}} \equiv \mathcal{F} - \frac{\hbar}{m^2} p^\mu \text{ReTr}(\gamma_\mu \mathcal{C}) \]

- Transport equations:

\[ p \cdot \partial \bar{\mathcal{F}} = m \mathcal{V}_F , \quad p \cdot \partial \mathcal{A}^\mu = m \mathcal{C}^\mu_A \]

with \( \mathcal{V}_F = 2 \text{Im Tr} (\mathcal{C}) \), \( \mathcal{C}^\mu_A \equiv -\frac{1}{m} \epsilon^{\mu\nu\alpha\beta} p_\nu \text{Im Tr} (\sigma^\alpha_\beta \mathcal{C}) \)
Spin in phase space

- In order to account for spin dynamics, enlarge phase space.
  
  J. Zamanian, M. Marklund, and G. Brodin, NJP 12, 043019 (2010)

- Introduce new phase-space variable $s^\mu$

  $f(x, p, s) \equiv \frac{1}{2} [\bar{F}(x, p) - s \cdot A(x, p)]$

- Obtain $\bar{F}$ and $A^\mu$ via

  $\bar{F} = \int dS(p) f(x, p, s) \quad A^\mu = \int dS(p) s^\mu f(x, p, s)$

  with $dS(p) \equiv \frac{\sqrt{p^2}}{\sqrt{3\pi}} d^4 s \delta(s^2 + 3) \delta(p \cdot s)$

- Boltzmann equation

  $p \cdot \partial f(x, p, s) = m \mathcal{C}[f]$}

  $\mathcal{C}[f] \equiv \frac{1}{2} (C_F - s \cdot C_A)$

- All dynamics in one scalar equation!
Nonlocal collisions

- Expand collision term up to **first order in** $\hbar$-gradients

$$\mathcal{C}[f] = \mathcal{C}_l[f] + \hbar \mathcal{C}_{nl}[f].$$

**Local** contribution + **Nonlocal** contribution

- Long calculation $\implies$ Intuitive result in low-density approximation:

$$\mathcal{C}[f] = \int d\Gamma_1 d\Gamma_2 d\Gamma' \mathcal{W}[f(x + \Delta_1, p_1, s_1)$$

$$\times f(x + \Delta_2, p_2, s_2) - f(x + \Delta, p, s)f(x + \Delta', p', s')]$$

$$+ \int d\Gamma_2 dS_1(p) \mathcal{W} f(x + \Delta_1, p, s_1)f(x + \Delta_2, p_2, s_2)$$

$$d\Gamma \equiv d^4 p\, dS(p)$$

- **Structure:** Momentum and spin exchange + Spin exchange only
- **Nonlocal** Collisions $\implies$ Displacement $\Delta$
- $\mathcal{W}, \mathcal{W}$ vacuum transition probabilities, depend on phase-space spins

**Condition for** $\mathcal{C}[f] = 0 \implies$ **Global equilibrium**
Equilibrium distribution function

- **Equilibrium condition:** Collision term has to vanish
- **Ansatz for distribution function**
  
  \[ f_{\text{eq}}(x, p, s) = \frac{m}{(2\pi\hbar)^3} \exp \left[ -\beta(x) \cdot p + \frac{\hbar}{4} \Omega_{\mu\nu}(x) \Sigma_{\mu\nu}^s \right] \delta(p^2 - M^2) \]

- \( \beta^\mu = \frac{u^\mu}{T} \) - Lagrange multiplier for 4-momentum conservation
- **Spin potential** \( \Omega^{\mu\nu} \) - Lagrange multiplier for **total** angular momentum conservation
- \( M \) - mass possibly modified by interactions
- **Spin-dipole-moment tensor**

  \[ \Sigma_{\mu\nu}^s \equiv -\frac{1}{m} \epsilon^{\mu\nu\alpha\beta} p_\alpha s_\beta \]

- Insert into \( \mathcal{E}[f] \) and expand up to first order in \( \hbar \)
Equilibrium conditions

\[ \mathcal{C}[\mathcal{f}_{eq}] = - \int d\Gamma' d\Gamma_1 d\Gamma_2 \tilde{\mathcal{W}} e^{-\beta \cdot (p_1 + p_2)} \times \left[ \partial_{\mu} \beta_{\nu} \left( \Delta^\mu_1 p^\nu_1 + \Delta^\mu_2 p^\nu_2 - \Delta^\mu p^\nu - \Delta'^\mu p'^\nu \right) - \frac{1}{2} \Omega_{\mu\nu} \frac{\hbar}{2} \left( \Sigma_{s_1}^{\mu\nu} + \Sigma_{s_2}^{\mu\nu} - \Sigma^{\mu\nu} - \Sigma'_{s_1}^{\mu\nu} \right) \right] \]

\[ - \int d\Gamma_2 dS_1(p) dS'_1(p_2) \tilde{\mathcal{W}} e^{-\beta \cdot (p + p_2)} \times \left\{ \partial_{\mu} \beta_{\nu} \left[ (\Delta^\mu_1 - \Delta^\mu) p^\nu_1 + (\Delta^\mu_2 - \Delta'^\mu) p^\nu_2 \right] - \frac{1}{2} \Omega_{\mu\nu} \frac{\hbar}{2} \left( \Sigma_{s_1}^{\mu\nu} + \Sigma_{s_2}^{\mu\nu} - \Sigma^{\mu\nu} - \Sigma'_{s_1}^{\mu\nu} \right) \right\} . \]

- Conservation of total angular momentum (orbital+spin) in a collision

\[ j^{\mu\nu} = \Delta^\mu p^\nu - \Delta^\nu p^\mu + \frac{\hbar}{2} \Sigma^{\mu\nu} \]

- Conditions for vanishing collision term

\[ \partial_{\mu} \beta_{\nu} + \partial_{\nu} \beta_{\mu} = 0 \]

\[ \Omega_{\mu\nu} = \omega_{\mu\nu} \equiv - \frac{1}{2} (\partial_{\mu} \beta_{\nu} - \partial_{\nu} \beta_{\mu}) = \text{const.} \]

Global equilibrium!
Spin hydrodynamics

- **Hydrodynamic densities:**
  - Energy-momentum tensor $T^{\lambda\nu}$
  - Total angular momentum tensor
    \[ J^{\lambda,\mu\nu} \equiv x^{\mu} T^{\lambda\nu} - x^{\nu} T^{\lambda\mu} + \hbar S^{\lambda,\mu\nu} \]
  - Additional dynamical tensor: Spin tensor $S^{\lambda,\mu\nu}$

- **10 equations of motion:** 4 usual hydro + 6 due to total angular momentum conservation
  \[ \partial_\mu T^{\mu\nu} = 0 \quad \hbar \partial_\lambda S^{\lambda,\mu\nu} = T^{[\nu\mu]} \]
  \[ T^{[\nu\mu]} = T^{\nu\mu} - T^{\mu\nu} \]

- **10 unknowns:** 4 + 6 additional independent fields (spin potential)
  \[ \beta^\mu = \frac{u^\mu}{T} \quad \Omega^{\mu\nu} \]

- Plus dissipative quantities

Pseudo-gauge transformations

Densities are NOT uniquely defined $\implies$ Relocalization

\[
T'_{\mu\nu}(x) = T_{\mu\nu}(x) + \frac{1}{2} \partial_\lambda \left[ \Phi^{\lambda,\mu\nu}(x) + \Phi^{\mu,\nu\lambda}(x) + \Phi^{\nu,\mu\lambda}(x) \right]
\]

\[
S'_{\lambda,\mu\nu} = S_{\lambda,\mu\nu}(x) - \Phi_{\lambda,\mu\nu}(x) + \partial_\rho Z^{\mu\nu,\lambda\rho}(x)
\]

\[
\Phi_{\lambda,\mu\nu} = -\Phi_{\lambda,\nu\mu}, \; Z^{\mu\nu,\lambda\rho} = -Z^{\nu\mu,\lambda\rho} = -Z^{\mu\nu,\rho\lambda}
\]

- Leave global charges invariant

\[
P^\mu = \int d^3 \Sigma_\lambda T^{\lambda\mu}(x) \quad J^{\mu\nu} = \int d^3 \Sigma_\lambda J^{\lambda,\mu\nu}(x)
\]

$\Sigma_\lambda$ - Hypersurface

- Conservation laws: $\partial_\mu T'_{\mu\nu} = 0$, $\partial_\lambda S'_{\lambda,\mu\nu} = T'[^{\nu\mu}]$

- **Canonical choice**: apply Noether’s theorem to Dirac Lagrangian
  $\implies$ **Problem**: does not lead to a covariant description of spin

- **Solution**: apply Noether’s theorem to Klein-Gordon Lagrangian for spinors

  J. Hilgevoord, S. Wouthuysen, NP 40 (1963) 1
Spin hydrodynamics with HW currents

From kinetic theory

\[
T_{\text{HW}}^{\mu\nu} = \int dP dS(p) \, p^\mu p^\nu f(x, p, s) + \mathcal{O}(\hbar^2)
\]

\[
S_{\text{HW}}^{\lambda, \mu\nu} = \int dP dS(p) \, p^\lambda \left( \frac{1}{2} \sum_5 \Sigma_5^{\mu\nu} - \frac{\hbar}{4m^2} p^{[\mu} \partial^{\nu]} \right) f(x, p, s) + \mathcal{O}(\hbar^2)
\]

Equations of motion

\[
\partial_\mu T_{\text{HW}}^{\mu\nu} = \int d\Gamma \, p_\nu \, \mathcal{C}[f] = 0
\]

\[
\hbar \partial_\lambda S_{\text{HW}}^{\lambda, \mu\nu} = \int d\Gamma \, \frac{\hbar}{2} \sum_5 \Sigma_5^{\mu\nu} \, \mathcal{C}[f] = T_{\text{HW}}^{[\nu\mu]}
\]

Energy-momentum conserved in a collision

Spin not conserved in nonlocal collisions \( \implies T_{\text{HW}}^{[\nu\mu]} \neq 0 \)

\( \implies \) Conversion between spin and orbital angular momentum

\( T_{\text{HW}}^{[\nu\mu]} = 0 \): (i) for local collisions (spin is collisional invariant)

(ii) in global equilibrium \( \mathcal{C}[f] = 0 \)

Nonlocal collisions away from global equilibrium \( \implies \) Dissipative dynamics

Correct nonrelativistic limit

Fluid gets polarized through rotation!
Polarization observable in heavy-ion collisions

Polarization vector for particle with momentum $p^\mu$ (e.g. Λ-hyperon)

\[
\Pi_\mu(p) = -\frac{\hbar}{2m} \epsilon_{\mu\nu\alpha\beta} p^\nu \int d\Sigma_\lambda s^{\lambda,\alpha\beta}_{\text{HW}}(x, p) \frac{1}{\int d\Sigma_\lambda p^\lambda F}
\]

\[
S^{\lambda,\alpha\beta}_{\text{HW}}(x) = \int d^4 p s^{\lambda,\alpha\beta}_{\text{HW}}(x, p) = \int d^4 p p^\lambda S^{\alpha\beta}(x, p)
\]

$\Sigma_\lambda$ - Hypersurface

Equilibrium

\[
\Pi_\mu(p) = -\frac{\hbar}{4m} \epsilon_{\mu\nu\alpha\beta} p^\nu \int d\Sigma_\lambda p^\lambda f(1 - f) \om^{\alpha\beta}
\]

\[
\om^{\alpha\beta} = -\frac{1}{2} (\partial^\alpha \beta^\beta - \partial^\beta \beta^\alpha)
\]

- Thermal vorticity

\[
f - \text{Distribution function}
\]

What are nonequilibrium effects on $\Pi_\mu(p)$?
Conclusions

Summary

- Derivation of **nonlocal** collisions from quantum field theory
  - Vanishing collision term $\Rightarrow$ **global** equilibrium

- Spin hydrodynamics with Hilgevoord-Wouthuysen pseudo-gauge
  - **Antisymmetric** part of energy-momentum tensor
    $\Rightarrow$ Orbital-to-spin angular momentum conversion
    $\Rightarrow$ **Vanishes** with **local collisions** or in **global equilibrium**
  - Local collisions $\Rightarrow$ Ideal spin hydrodynamics possible
    **Nonlocal collisions** $\Rightarrow$ Always **dissipative** dynamics

Outlook

- Derive second-order dissipative spin hydrodynamics
- Study nonequilibrium and spin hydrodynamic effects on polarization vector
- Possible explanation to "sign problem"?
