

# XXVIII International Workshop on Deep-Inelastic Scattering and Related Subjects

Contribution ID: 683

Type: **Contributed Talk**

## Exclusive electroproduction of a charmed meson at EIC

*Thursday, 15 April 2021 13:16 (18 minutes)*

Charged current events in an exclusive electroproduction process have not been much discussed up to now. The reason is simple as the smallness of the weak coupling prevents exclusive cross-sections from being large enough to allow sufficient counting rates at existing electron-nucleon facilities. The very high luminosity anticipated at planned high energy electron ion colliders should open this physics domain to a detailed investigation of various interesting channels. We calculate the leading order amplitude for exclusive production of a  $D_s$  pseudoscalar and  $D_s^*$  vector charmed meson on an unpolarized nucleon and investigate if this process may be accessed at future electron-ion colliders.
