## Extraction of TMD with Drell-Yan and SIDIS data

*Thursday, 15 April 2021 09:30 (18 minutes)*

The factorization of the differential cross section Drell-Yan and DIS has recently allowed several extractions of TMD. The extractions are based on the double-evolution of TMD and a matching on PDF. The new results show a high sensitivity to the PDF sets that I like to discuss in this talk and that can be interesting for future analyses. Several recent results obtained by our group will be shown.
